

**Amendments to the Drawings:**

The drawings were objected to, as the Office Action contends that an embodiment in which incident light is redirected to a sensor and a direction of sight is identified or an angle is determined was not shown. Applicants respectfully disagree, as FIG. 1 shows the splitting or redirecting of incident light to a sensor and FIGS. 5 and 6 show identification of a direction of sight or an angle determination. Further, as described in the specification (*see* pages 24-27), the embodiments of FIGS. 5-7 can be used with the system of FIG. 1.

Nevertheless, enclosed herewith is a proposed drawing correction to FIG. 10A to include an additional block regarding the splitting or redirection of incident light to a sensor.

Furthermore, appropriate amendment to the specification has been made. No new matter has been entered
